

Due-Diligence Report: repo_2

Self-audit passed — every finding this report gathered is cited below.

Verdict: 3/10 — Est. 6-12 engineer-hours to acquisition-ready

repo_2 installs successfully but automated tests fail during collection, leaving core correctness unverified. Secret scan identified non-test credential findings in hl7_server_Production_DB.py. Total remediation cost is estimated at 9 hours (range 6-12h).

Remediation Cost Estimate

Item	Hours	Basis
Rotate 1 hardcoded credential(s) found in production code	1	1h per finding (rotate + remove from code + wire to secrets manager)
Stand up a working automated test suite	8	Flat estimate — tests did not run successfully during audit

Total: 9 hours (range: 6-12h)

Heuristic estimate based on the stated per-item assumptions above, not a professional engineering quote. Presented as a range (6-12h) to avoid false precision. Does not include general code-quality improvements beyond the specific findings listed.

Risks

- Non-test secret finding in hl7_server_Production_DB.py.
Secret scan: file hl7_server_Production_DB.py, line 134, type High-entropy string (possible secret), in_test_dir: false.
- Automated tests failed during collection.
Build/test evidence: ERROR hl7_client_2_one_test.py - ConnectionRefusedError.

Strengths

- All 3 declared dependencies are pinned.
Dependency evidence: unpinned_count: 0, total_declared: 3, manifest_type: requirements.txt.
- No vulnerable dependencies detected.
Vulnerability scan: packages_checked: 3, vulnerable_count: 0.

License

Project license: **not found**

Dependencies checked: 3, conflicts: 0, unknown license: 1

Ownership & Continuity Risk

1 contributor(s), top contributor: 100.0% of commits, last push: 52 days ago

Could Not Verify

- Project license status because project_license found is false.
- Container setup because has_dockerfile and has_compose are false.
